Overview

The capstone project consists of a technical work proposal, the proposal’s implementation, and a post-implementation report that describes the graduate’s experience in developing and implementing the capstone project. The capstone project should be presented and approved by the mentor in relation to the graduate’s technical emphasis.

Competencies

↑ Capstone
The graduate integrates and synthesizes competencies from across the degree program, thereby demonstrating the ability to participate in and contribute value to the chosen professional field.

Learning

Getting Started
You are now approaching graduation. The capstone is a culmination of your work and experience up to this point. This course requires the completion of a capstone proposal and a capstone report; this is your performance assessment. The course material walks you step-by-step through both the capstone proposal and written report templates, as well as offers some helpful tips.

The following six steps mark progress through the capstone experience:

1. Submit a brief project idea, and receive approval to continue.
2. Write the full proposal to conduct a project based on the project idea.
6. Submit the capstone paper for grading.

All necessary templates, waivers, and forms are accessible for download within your course and your assessment. Capstone course mentors and your capstone evaluator are available to help guide you.

Before proceeding, click the Human Subjects’ Protection link in the Course Information box below, and follow the instructions. You will need this when completing Task 1 in TaskStream.

Assessments

- Performance Assessment: IT Capstone Written Project

Status: Not Attempted
Code: EYP1
