Overview

In the Nursing Informatics Field Experience, you will complete a hands-on field experience while working with a preceptor in a setting relevant to your professional situation and nursing informatics. Today’s rapidly changing health delivery system requires nurse informaticists to be prepared to effectively lead change and facilitate learning that is dynamic and meets the needs of a diverse student and professional nursing population. To help you develop competency in this area, you will apply methods and solutions to support clinical decisions and improve health outcomes by designing data collection instruments, developing a database management system and analyzing data using statistical and geospatial techniques in a simulated environment.

Competencies

- **Designing Clinical Decision-Support Tools**
  The graduate integrates the latest evidence and technology and the expertise of the interprofessional team to design or refine clinical decision-support tools.

- **Designing Innovations in Data Collection and Management**
  The graduate designs innovations in data collection and management, in collaboration with the interprofessional team, to effect change in practice and improve health outcomes.

- **Designing Comprehensive Solutions**
  The graduate designs comprehensive solutions, integrating change and complexity theory concepts, for effective implementation to enhance health outcomes.

Learning

**Getting Started**

Welcome to your Nursing Informatics Field Experience course! Begin the course by reviewing the learning resources available to you, which include your VitalSource e-textbooks and tutorials from the Centers for Disease Control. Your resources involve textual content, videos, checklists, and various interactive elements. Next, review the Pacing Guide and develop a plan for completing your course. You should complete the learning block activities in the order they appear to ensure successful completion of your final project tasks. Be assured that your successful completion of the course is well supported by the course learning materials and your course mentors. Check the course announcements for useful messages about the course and contact your course mentors for assistance as questions arise.
specific homework assignments and meet online with mentors and students regularly to discuss the challenging topics.
