Legal Issues in Information Security – C841

Course Feedback

Overview

Security information professionals have the role and responsibility for knowing and applying ethical and legal principles and processes that define specific needs and demands to assure data integrity within an organization. This course addresses the laws, regulations, authorities, and directives that inform the development of operational policies, best practices, and training to assure legal compliance and to minimize internal and external threats. Students analyze legal constraints and liability concerns that threaten information security within an organization and develop disaster recovery plans to assure business continuity.

Competencies

- **Compliance Legal Requirements**
  The graduate describes the legal requirements to address compliance with cybersecurity policies and procedures within an organization.

- **Protection Against Security Incidents**
  The graduate analyzes applicable laws and policies to legally protect the organization against security incidents.

- **Security Awareness Training and Education**
  The graduate outlines legal issues that should be included within the security awareness training and education program of an organization.

- **Ethical Issues for Cybersecurity**
  The graduate discusses the implications of ethical issues for specific cybersecurity actions within an organization.
