Instructional Theory focuses on exploring instructional design theory and related models and processes. Students will apply instructional design principles to the design and delivery of plans to meet the learning needs found in the instructional setting.

### Competencies

- **Instructional Design Models**
  The graduate applies empirically-based, professionally recognized instructional design models to the development of instruction.

- **Instructional Design Strategies**
  The graduate develops strategies for addressing predicted challenges to the effective delivery of instruction and incorporates these strategies into the design of instruction.

- **Learner Motivation**
  The graduate develops instruction that accounts for learner motivation and achievement through the application of instructional design principles.

- **Instructional Design Methodologies**
  The graduate evaluates various instructional design methodologies.

- **Individual Learning Preferences and Modalities**
  The graduate develops instruction that accounts for individual learning preferences and modalities through the application of instructional design principles.

### Learning

- **Getting Started**

### Assessments

- **Performance Assessment: Instructional Theory**

  **Status:** Not Attempted
  **Code:** JWT2
